Investment Objective

Thematic Stock & ETF Portfolio Capturing India's Digital, Manufacturing & Consumption Growth

Portfolio Rationale

A diversified growth portfolio strategically positioned across India's key economic drivers, including financial services, manufacturing, defense, technology, consumer sectors, and thematic ETFs. Designed for investors seeking long-term capital appreciation through exposure to high-potential sectors shaping India's future growth trajectory. Rebalanced quarterly to maintain alignment with evolving market opportunities.

01 - HIGHLIGHT
A focused portfolio of 10 stocks and ETFs, emphasizing quality, growth, and dynamic position sizing.

02 - HIGHLIGHT
Designed for long-term growth with risk-managed exposure, leveraging fundamental analysis to capture high-quality opportunities.

03 - DYNAMIC
weight allocation ensures exposure across all holding

04 - HIGHLIGHT
Quarterly rebalancing allows the portfolio to adapt to changing market conditions and maintain optimal stock selection.

PHILOSOPHY ANCHOR

Chanakya – the strategist of enduring wealth

Invest with philosophy. Grow with discipline.

Invest with philosophy. Grow with discipline.

Volatility & Risk Profile

Each Streetfolio is placed in one of three volatility buckets — Low, Medium or High — by comparing its daily value fluctuation against the Nifty 100 Index. Bharath 10X is categorised **High Volatility**: investment values can move sharply and suddenly. It is suitable only for investors with a long horizon and the temperament to withstand interim drawdowns.

Low | Medium | **High**

Holdings & Allocation Framework

SECTOR UNIVERSE

- A focused portfolio of 10 stocks and ETFs, emphasizing quality, growth, and dynamic position sizing.
- Designed for long-term growth with risk-managed exposure, leveraging fundamental analysis to capture high-quality opportunities.
- Dynamic
- Quarterly rebalancing allows the portfolio to adapt to changing market conditions and maintain optimal stock selection.

CONSTITUENT CATEGORIES

- Large Cap (Rank ≤ 100 by m-cap)
- Mid Cap (Rank 101–250)
- Small Cap (Rank > 250)
- Multicap ETFs
- Gold / precious-metal ETFs

Specific constituents, conviction weights and segment-wise holdings distribution are disclosed to active subscribers within the Streetfolio platform and are reviewed at each rebalance. Weights are assigned by conviction; where unspecified, equal weights are assumed for calculation.

Rebalance Schedule

Rebalance Frequency	Last Rebalance Date	Next Rebalance Date
Quarterly	April 01, 2026	July 01, 2026

Rebalancing is the periodic review and update of constituents so the portfolio continues to reflect its underlying theme and strategy.

Definitions & Disclosures

PERFORMANCE DISCLOSURE — IMPORTANT

In line with SEBI's Performance Validation Agency (PaRVA) framework and the interim circular of October 2023, past performance figures (including CAGR and returns) are **not displayed publicly**. Live performance may be shared on a one-to-one basis upon a client's request, duly certified by a CA/CMA. Such figures are **not validated by a regulatorily-recognised performance validation agency**, as the framework is yet to be operationalised. Charts and performance numbers never include backtested data; only live data is considered.

CAGR

CAGR (compounded annual growth rate) is a useful measure of growth or performance of a portfolio. Every year returns generated by a portfolio are different. Let's say if a portfolio is live for 3 years and returns generated by the portfolio are 5%, 15% & -7%, respectively in the first, second and third year. Then we calculate CAGR as a return number that would give the same terminal investment value at the end of three years, as we get when the portfolio gains by 5% & 15% in the first two years and drops by 7% in the third year. The CAGR in this case would be 3.94%. This means that you will always end up with the same investment value at the end of the third year, if your portfolio gains by 3.94% every year or 5%, 15% and -7%, respectively in the first, second and third year.

In simple words, it indicates the annual return generated by the Streetfolios from the date of launch. For Streetfolios live for less than 1 year, absolute returns in the applicable time period are shown. Only live data is considered for all calculations. Returns and CAGR numbers don't include backtested data.

P.S. - CAGR calculation methodology got updated from 25th Apr 2022 on all Streetfolios Platforms. Please read this post to understand the changes in detail.

Volatility Label

Changes in stock/ETF prices on a daily basis result in fluctuations to the investment value of your portfolio. In order to help investors understand the extent of fluctuation they might observe with their Streetfolios investment, every Streetfolios is categorized into one of the three volatility buckets - High, Medium and Low Volatility. This is done by comparing the Streetfolios volatility against that of the Nifty 100 Index.

If the daily change in the investment value of a portfolio is too drastic, it means prices of stocks/ETFs in the portfolio are changing very rapidly. Such portfolios have High Volatility. Investing in High Volatility Streetfolios means that changes in your investment values can be very sudden and drastic, whereas fluctuations in the investment value of Low Volatility Streetfolios are expected to be lower in comparison.

For more information about how volatility is calculated, please check here.

Investment Horizon

For each portfolio, the manager provides a recommended investment time duration to realise the best returns for the portfolio. Each portfolio has one of the following recommended investment horizon:

- Short Term: For portfolios with recommended duration of < 1 year
- Medium Term: 1–3 years
- Medium Term: 1–3 years

Asset Class

The specific constituents of each portfolio are selected from a universe defined by the managers. This constituent universe is labelled as Asset Class.

- If the asset class is Equity Large Cap, then all underlying portfolio constituents are selected from the Large Cap segment representing top 100 companies by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is Equity Mid Cap, then all underlying portfolio constituents are selected from the Mid Cap segment representing the companies ranked 101 to 250 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is Equity Large & Mid Cap, then all underlying portfolio constituents are selected from the Large & Mid Cap segment representing the top 250 companies by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is Equity Small Cap, then all underlying portfolio constituents are selected from the Small Cap segment representing the companies ranked greater than 251 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is Equity Mid & Small Cap, then all underlying portfolio constituents are selected from the Mid & Small Cap segment representing the companies ranked greater than 100 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is Equity Multi Cap, then all the underlying portfolio constituents are selected from Multi Cap segment which may include companies from more than two of the Large Cap, Mid Cap, Small Cap categories as described above
- If the asset class is Debt, then all the underlying portfolio constituents are Debt instruments If the asset class is Commodity, then all the underlying portfolio constituents are Commodity instruments
- If the asset class is Commodity and Debt, then all the underlying portfolio constituents are either Debt or Commodity instruments
- If the asset class is Multi-Asset, then the underlying portfolio constituents comprise a mix of Equity, Gold, Silver, Commodity, Debt or REIT/INVIT constituents

Rebalance

Rebalancing is the process of periodically reviewing and updating the constituents of a Streetfolios. This is done to ensure that constituents in the Streetfolios continue to reflect the underlying theme or strategy.

Categorisation of the portfolio constituents

All Streetfolios constituents fall in one of the below categories:

- Large Cap
- Mid Cap
- Small Cap
- Multicap ETFs
- Gold

Holdings Distribution

All constituents belonging to a Streetfolios are categorised under different segments. Weightage of a segment is calculated as the sum of weights of all constituents belonging to that segment. Suppose 4 constituents, with each having a weight of 10%, belong to the Large Cap segment. Then the weight of the Large Cap segment in the Streetfolios will be 40% (4*10%).

If the manager has not prescribed any weights, equal weights are assumed for calculations.

Determination of comparable index

For each portfolio, a comparable index is determined on the basis of the holdings distribution of the portfolio.

- If the sum of weights of gold, silver, commodity, debt or REIT/INVIT constituents is greater than 50%, then comparable index is determined as Equity Large Cap If the sum of weights of large cap constituents is greater than 50%, then comparable index is determined as Equity Large Cap If the sum of weights of mid cap constituents is greater than 50%, then comparable index is determined as Equity Midcap
- If the sum of weights of small cap constituents is greater than 50%, then comparable index is determined as Equity Smallcap
- If the sum of weights of large cap constituents is greater than 30%, sum of weights of mid cap constituents are greater than 30%, and sum of weights of large cap and mid cap constituents are greater than 80%, then comparable index is determined as Equity Large & Midcap
- If the sum of weights of small cap constituents is greater than 30%, sum of weights of mid cap constituents are greater than 30%, and sum of weights of small cap and mid cap constituents are greater than 80%, then comparable index is determined as Equity Mid and Smallcap
- If none of the above conditions are met, then comparable index is determined as Equity Multi-cap

Comparison of live performance

To help investors make informed decisions, Streetfolios platform provides many tools. One of the tools provided on the platform is the comparison of the live performance of the portfolio. This comparison is a tool to communicate factual & verifiable returns on behalf of the Streetfolios creator. It should not be considered as an advertisement, promotion or claim. The performance of the portfolio is not validated by a regulatorily-recognised performance validation agency, since the framework is yet to be operationalized by the authorities. The following methodology is used to provide users different options to compare the performance of the Streetfolios:

- All Streetfolios have an option to compare the live performance against returns generated by Bank FDs, Inflation and Equity asset class
- FD returns are calculated using the data available from RBI. The annual data for 1-3 years deposit rates is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual deposit rates provided by RBI. For instance, if the annual deposit rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as 1*(1+6%)*(1+7%) - 1 =13%. This series is also utilised to determine the CAGR between any 2 specified dates
- Inflation returns are calculated using the data available from IMF. The annual percent change in average consumer prices is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual inflation rates provided by the IMF. For instance, if the annual inflation rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as 1*(1+6%)*(1+7%) - 1 = 13%. This series is also utilised to determine the CAGR between any 2 specified date
- All Streetfolios have an option to compare the live performance against returns generated by Equity Largecap section of the market - represented by Nifty100 index
- All Streetfolios also have an option to compare the live performance against the comparable index, determined using the methodology provided above. Following options are made available, as per the determined comparable index:

General Investment Disclosure
